

FALL ECOLOGICAL GARDENING

Cover Crops

REBUILD SOIL FERTILITY, ADD ORGANIC MATTER, & PROTECT SOIL FROM WINTER DAMAGE

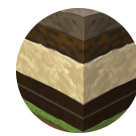

- By early fall, sow seeds of cover crops that meet your ecological gardening goals to save money on compost and feed soil micro-organisms.

Soil Testing

TEST, DON'T GUESS! MAXIMIZE SOIL HEALTH WHILE MINIMIZING INPUTS

- Test for fertility, contaminants, or other properties before soil freezes.
- Use your results to amend your soil using organic amendments either now or in early spring.

Build Healthy Soil

CREATE HEALTHY, FERTILE SOIL STARTING IN THE FALL

- Use sheet mulching, hügelkultur, or other techniques to rehabilitate established beds or create new ones.
- Add compost to annual beds or around newly planted perennials.
