Wildlife in the Garden

How to Live in Harmony
with Deer, Raccoons,
Rabbits, Crows,
and Other Pesky
Creatures

EXPANDED EDITION

Deerproofing Your Yard & Garden

RHONDA MASSINGHAM HART

THE BUCK STOPS HERE!

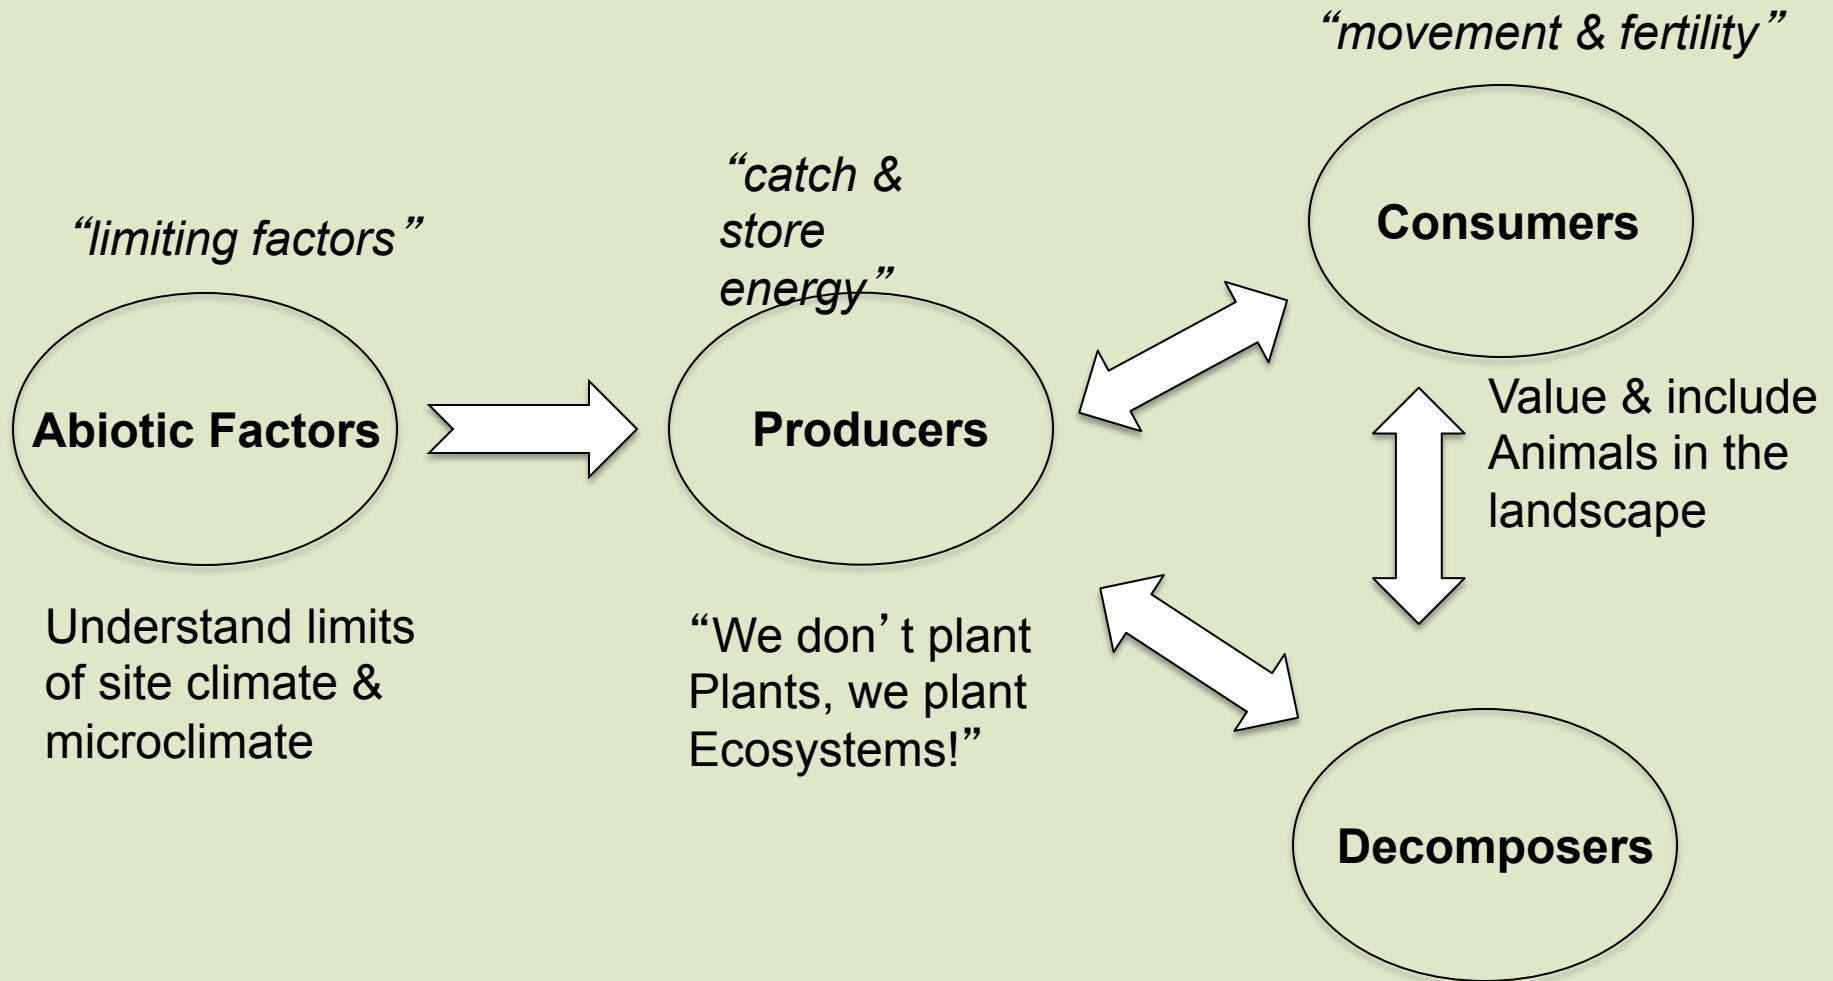

- ❶ Surefire plants deer truly hate
- ❷ Homemade & store-bought deterrents that really work
- ❸ Innovative fencing & netting options
- ❹ Up-to-date information on Lyme disease

2nd Edition
COMPLETELY
REVISED &
UPDATED

Foreword by
JIM WILSON

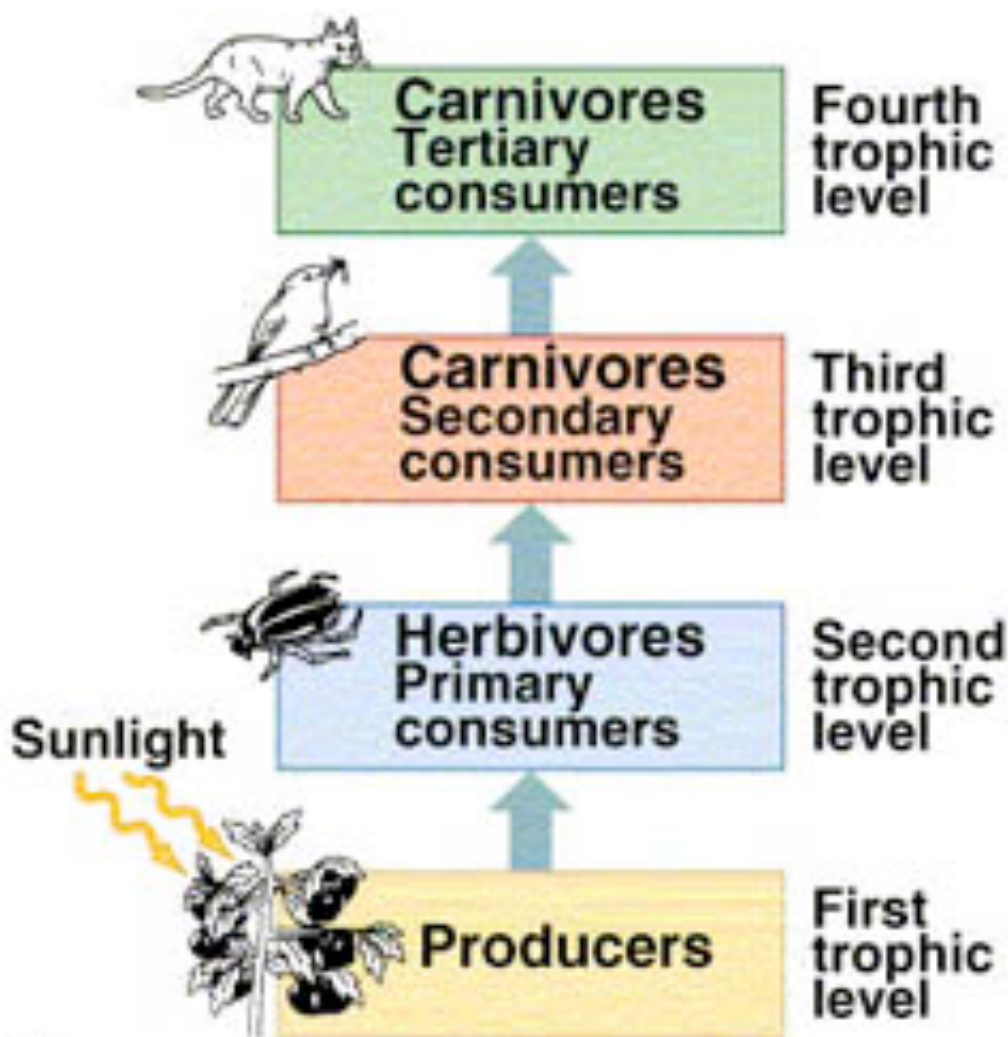

Basic Ecology

Decomposers or *Recomposers*?

Ecosystem energy flow

a.

2/3 of ECOSYSTEM biomass goes directly to decomposers

Gardens & Farms need to be net
biomass producers!

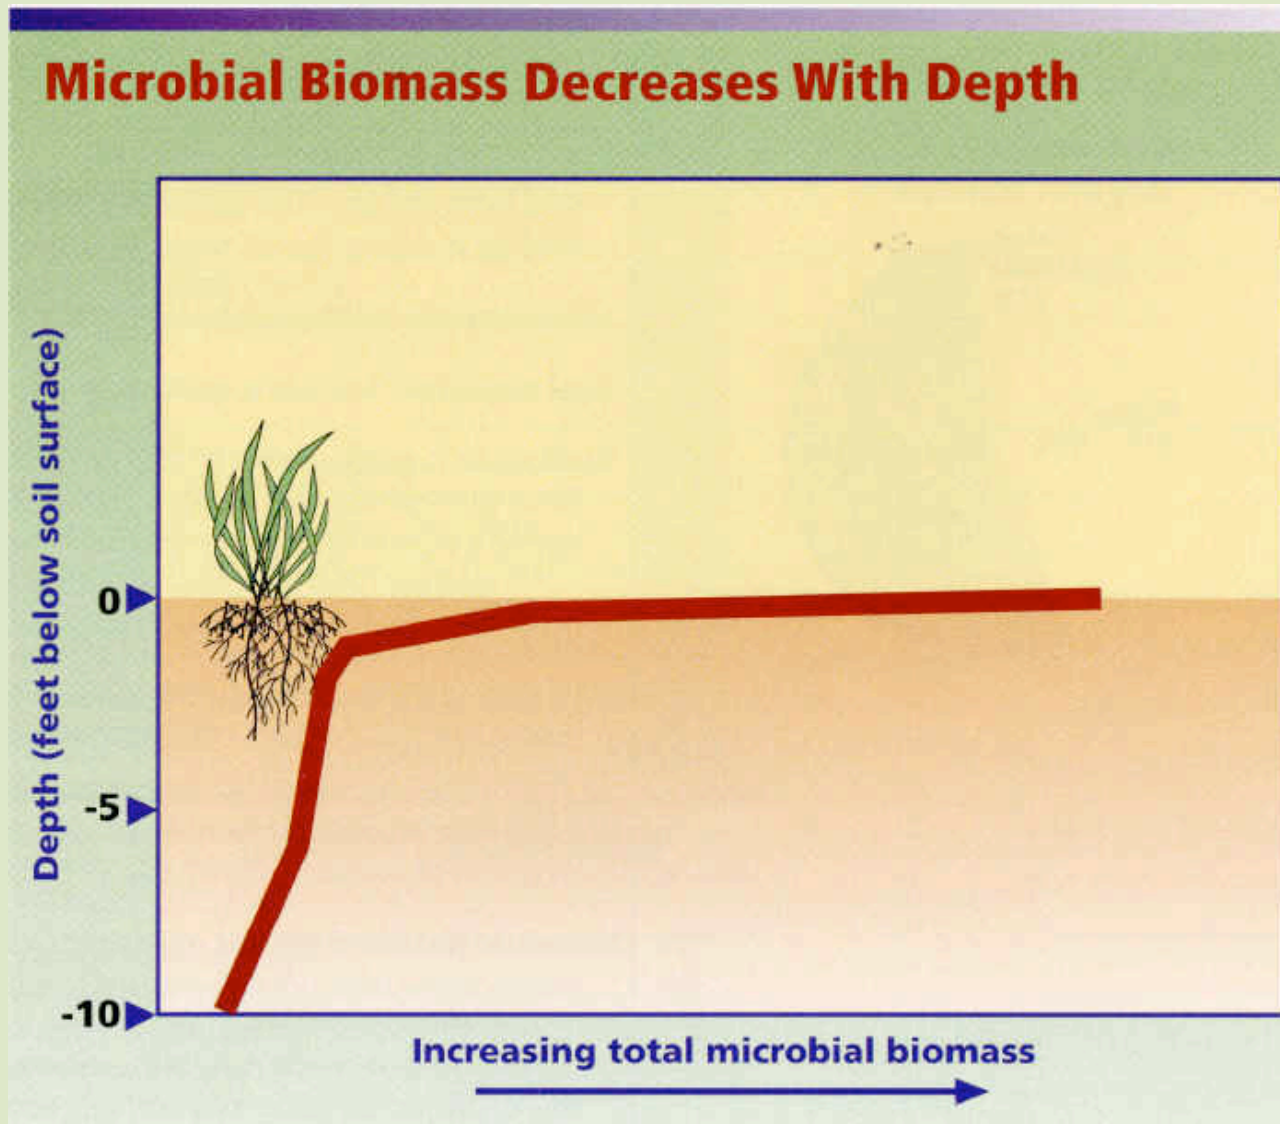

Diverse forms of Organic Matter,

Living and Dead,

Pulsing throughout the season

Living

Organisms Live in Rhizosphere

This image shows increased drought tolerance of a plant with a mycorrhizal relationship.

Fred T. Davies, Texas A&M Aggie Horticulture

Crop Residues

Sunchoke

*Helianthus
tuberosus*

Living Mulch: “Chop and Drop”

NUTRIENT ACCUMULATORS

Sorrels

Rumex spp.

Comfrey

*Symphytum X
uplandicum*

**Cover
Crops**

SOIL DECOMPACTORS

NITROGEN FIXATION

Dead

Wine Cap
Stropharia rugosa annulata

Putting it together:
“Pulsing throughout the seasons”

Wood Chips

Composted
For
2-3
months

Structure & Aggregation in Soil

Bacteria glue together small aggregates (clumps of soil)

Fungi glue them into larger aggregates.

REDUCE TILLAGE FREQUENCY/DEPTH

Tilling breaks these aggregates apart and they have to start all over!

Tilling w/o cover crops leads to more erosion

Tilling stirs up weed seeds

SHEET MULCH: **mimicking how nature builds soil**

Let vegetation or cover crop grow first and slash down before you mulch

...Then Aerate with pitchfork or broadfork

Mulch (Straw, Woodchips)

Finished compost

**WEED BARRIER
(newspaper or cardboard)**

**Weedy compost,
manure, amendments
2 – 6"**

**Existing Soil
(weed seed layer)**

Planting in sheet mulch

Hori Hori

Does mulch “rob” nitrogen ?

“Carbon-rich woody wastes will not compete with plants for nitrogen if they are placed on the soil surface around plants. However, these materials should not be mixed into soil without extra nitrogen fertilizer Use wood chips and sawdust to mulch trees and shrubs where the soil is not tilled and the mulch stays on the surface. “

*ALL ECOSYSTEM DESIGN SHOULD BEGIN
WITH SOIL BUILDING.*

*THE PRIMARY YIELD IN YEAR ONE AND TWO
SHOULD BE HEALTHY, LIVING SOIL*

Cornell University
Cooperative Extension and
Department of Horticulture

This presentation *Ecology for Garden Design* was originally created by Steve Gabriel for use in the fall of 2013 for the Cornell Garden-Based Learning Regional Training for Cornell Cooperative Extension educators and Master Gardener Volunteers. This training kicked off our CCE 2014 Growing Season Educational Campaign: Designing for Garden Ecosystems.
